English — — — — —

Technical Skills

Languages & Backend
Python, TypeScript, REST APIs, Microservices
AI / Machine Learning
LLMs, RAG, LangChain, AI Agents, ASR, NLP, Whisper, Ollama, Computer Vision, YOLO, InsightFace
Cloud & Infrastructure
Docker, Linux, Azure, Git
Databases
PostgreSQL, MySQL, MongoDB
Development Practices
Spec Driven Development, BMAD Method, Jira, GitHub Copilot, Azure Devops
Architecture & Design
Microservices Architecture, State-Driven Architecture, Monolithic Architecture, Asynchronous Processing, Event-Driven Workflows

Education

Software Engineering (2012 - Incompleted)

Pedro Diaz
— Backend / AI Developer

Senior Backend & AI Engineer with experience designing scalable architectures for AI-powered and distributed systems using Python.

Strong background in microservices, state-driven architectures, and monolithic systems, with expertise in LLM applications, ASR pipelines, intelligent document processing, and multi-agent orchestration.

Experienced in building production-ready backend services, AI workflows, and high-availability systems focused on scalability, maintainability, and automation.

Work experience

Backend / AI Developer Apr 2025 - Present
Sofre Digital SA - Remote
Designed and developed Python microservices for intelligent processing of documents, audio, and images in AI-driven workflows.
Built ASR pipelines with LLM-based post-processing to improve transcription quality and normalization.
Designed agent-based architectures and RAG workflows using LangChain for automation and knowledge retrieval.
Collaborated in the adoption of Spec-Driven Development (SDD/BMAD) practices to improve delivery quality and development efficiency.

Software Engineer Jun 2024 - Apr 2025
Etermax - Remote
Developed intelligent document processing solutions for banking institutions, focused on information extraction and fraud detection.
Integrated LLMs for semantic analysis, validation, and classification of financial documents.
Designed backend services and REST APIs for scalable document processing pipelines.
Worked on automation workflows to reduce manual validation efforts and improve processing efficiency.

Software Developer Jan 2021 - Jun 2024
Servicio Meteorologico Nacional - Remote
Developed and maintained Python-based RESTful APIs for internal operational systems.
Built automation workflows for meteorological data and image processing tasks.
Implemented backend solutions for dynamic image generation and data handling.
Refactored and modernized legacy systems to improve maintainability and operational efficiency.
Collaborated with multidisciplinary teams in the development of internal technical tools and data-driven solutions.
